

New Integrated Touch Screen Display for DocSend

Shipping in July, 2006

DocSend will be shipping with a new, integrated touch screen display. Like previously-shipped units, this display features:

- 15-inch SVGA LCD monitor
- Portrait orientation
- Resistive touch screen
- Independent power
- Interfaces to the PC through video and USB cables

The integrated touch screen display also will include new features for user productivity improvement:

- Digital media reader and USB port, supporting the following flash media types for image import/export.
 - ✓ Compact Flash (CF)
 - ✓ Micro Drive (MD)
 - ✓ Memory Stick (MS)
 - ✓ MultiMedia Card (MMC)
 - ✓ Secure Digital (SD)
 - ✓ Smart Media (SM)
 - ✓ USB flash drive
- Accommodation for integrated RFID card reader or biometric security device
- Mounting holes for VESA 75mm and 100mm interfaces (compatible with most after-market desktop/wall-mount stands)

Because the media reader and security readers are integrated into the monitor, there is a lot more flexibility for deploying DocSend. Installation is much easier with fewer electrical connections required. Also, users will have the option of deploying DocSend without the factory stand.
